

Certification Requirements

Engineer

The individual must show good train operation and safety. Must show attentiveness to the train and the conductor of the train. Be an engineer at five or more Youth Operation Sessions with an advisor and certified by that advisor to run a train under Operator Session rules. Understand basic terminology for communicating with the conductor.

Requirements:

- **Prerequisite: Assistant Engineer Certification**
- *Know timetable and operating rule compliance.*
- *Know and demonstrate the proper communication with the conductor including planning the switching.*
- *Successfully participate in, and complete at least five Youth Group Operations sessions as the engineer.*

Being a Certified Engineer **enables** a Youth Group Member to participate in the main club operation events.

At regular club operation events, regular members have priority. A Youth Group member with Engineer certification **may request** a position for the main club event. If granted, you will be paired with a conductor until you hold both the Engineer and Conductor certifications.

When you have both Engineer and Conductor certifications you may run solo at the main club operations events.
